

of training sequence frequency bins;

means for performing point-by-point operations between corresponding signal sequence frequency bins and training sequence frequency bins; and

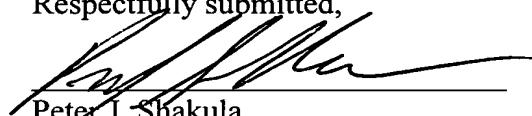

means for concatenating the point-by-point operations associated with the channel to provide a composite frequency response for the channel, the composite frequency response allowing, in the time domain, generation of the channel impulse response for the channel.

**REMARKS**

The above amendment is made in order to complete claim 13, which inadvertently had its text omitted when the application was filed.

Date: August 3, 2001
